With over 30 years of field experience, Valspar Weather-X silicone polyester system is a proven performer. It is an excellent exterior finish for Pre-engineered, Agri-buildings, Components, and Insulated panels.

A 30% siliconized polyester, Weather-X minimizes chalking and fading by resisting the detrimental effects of the sun's UV rays, rain, humidity and weathering.

Weather-X also fights the effects of acid rain which can cause corrosion. Superior abrasion resistance allows this product to better endure the physical abuse of fabrication, transit, and construction without cracking or marring.

Weather-X is also available in a wide range of standard and custom colors. A USDA approved white for applications where incidental contact with food occurs is available upon special request.
